CFP®, CPA/PFS, RFC,
ESTATE PLANNING ATTORNEY
Fiduciary

Week of April 6, 2026

Last week's newsletter was titled ***"THIS IS NOT THE KIND OF MARKET RETIREES CAN AFFORD TO GET WRONG"***. In it, we reviewed a simple math exercise comparing returns on a more aggressive portfolio, to a more conservative one. Once you're in, or even close to retirement, we think it's really important to protect principal first, and chase returns second. You can't spend returns, only dollars. And large losses can permanently degrade your portfolio's ability to generate dollars. You can read the newsletter here: [Newsletter - Moulton Wealth](#).

ATTEND OUR...

FINANCIAL & TAX PLANNING SEMINAR ***Including the "BIG BEAUTIFUL BILL"***

BRING A GUEST

- **APRIL 15, 2026 – RICHLAND**
- **APRIL 21, 2026 - SPOKANE**

CALL **509-922-3110** TO RESERVE A SEAT OR IF YOU
WANT A SECOND OPINION ON YOUR PORTFOLIO!

Last Saturday's radio show discussed Iran, the price of oil, the economic impact, and whether it could end up being the pin that pricks the asset bubble, especially in real-estate and private credit. You can listen to past radio shows here: [Radio Show - Moulton Wealth](#).

Please see our website www.MoultonWealth.com. Of the many improvements, the most important is we now host podcasts of past radio shows, allowing you to listen at your convenience. You can also read all the past newsletters and take the test to find your Risk Number.

When Energy Becomes a Tax on the Economy

In today's markets, the data can be confusing. Some reports look strong on the surface. Others suggest trouble may be building underneath. When the signals conflict like this, investors should be careful about making big assumptions about the future.

One of the biggest risks right now is energy.

For years, economists have described high energy prices as a kind of **"tax on the economy."** It is not a tax passed by Congress, but it works the same way. When energy prices rise, households and businesses must spend more just to keep operating. That means less money available for everything else.

Think about a typical household. If gasoline rises sharply and utility bills climb at the same time, that family has less money for restaurants, travel, home repairs, or saving for the future. Businesses face the same squeeze. Higher transportation costs, higher manufacturing costs, and higher shipping expenses all reduce profit margins.

When enough of these pressures build up, economic growth begins to slow.

Right now, the conflict surrounding the **Strait of Hormuz** has created exactly this type of risk. Roughly one-fifth of the world's oil supply moves through that narrow shipping lane. When war or political tension threatens that route, energy prices can surge or become unstable. Even if supplies continue moving, the cost of insurance, shipping, and risk premiums can push prices higher.

Those higher costs spread through the global economy like ripples in water.

LISTEN TO RIAL'S AND DON'S RADIO SHOW,

“YOUR MONEY MATTERS”

EVERY SATURDAY MORNING AT

8:00 AM ON KXLY RADIO CHANNEL 920 AM IN SPOKANE

AND AT 9:30 AM ON NEWSTALK RADIO CHANNEL 870 AM IN THE TRI-CITIES AREA

LISTEN LIVE AT WWW.NEWSTALK870.AM AGAIN AT 9:30 EACH SATURDAY MORNING

The Chain Reaction

Energy is not just another commodity. It is the foundation of the entire modern economy.

Oil and natural gas affect transportation, manufacturing, plastics, fertilizer production, and food distribution. When energy prices spike, the cost of producing and moving almost everything increases.

Over time this creates a chain reaction.

Consumers spend more on essentials and less on discretionary items. Businesses face shrinking margins. Economic growth slows. If the pressure lasts long enough, recession risk rises.

That is why investors pay such close attention to energy markets during geopolitical conflicts. Energy shocks have historically been one of the fastest ways to slow economic growth.

And the concern is not simply the price of oil itself. The worry is the **uncertainty surrounding global shipping routes and energy supply**. War-risk insurance for tankers has surged, shipping traffic has slowed, and global fertilizer prices are already rising because the Middle East is a major producer of fertilizer inputs.

These kinds of disruptions do not always show up immediately in economic reports. But over time they can push prices higher across many industries, from food to transportation.

When that happens, consumers eventually pull back.

And when consumers pull back, economic growth weakens.

History Shows the Risk

Energy shocks have triggered some of the most painful bear markets in modern history.

The most famous example was the **1973 Oil Crisis**. When oil supplies were restricted, energy prices surged around the world. Inflation jumped, economic growth slowed sharply, and

the stock market entered a deep bear market. The ***S&P 500 ultimately lost nearly half its value*** during that period.

Another example came with the **1979 Oil Crisis** following the **Iranian Revolution**. Once again, oil prices spiked, inflation surged, and the U.S. economy slipped into recession. Markets struggled for years under the pressure of high energy costs and weak economic growth.

Even more recently, energy shocks played a role in the **2008 Global Financial Crisis**. Oil prices surged to record levels just before the crisis unfolded, putting additional pressure on consumers and businesses already dealing with financial stress. By the time the downturn reached its worst point, the ***S&P 500 had fallen more than 50 percent from its peak***.

These examples do not mean history will repeat exactly. But they do show how powerful energy shocks can be.

When the cost of energy rises quickly, it can slow spending, squeeze profits, and increase the risk of recession. Markets tend to respond to that risk long before the economic damage becomes obvious.

Why a Sell Discipline Matters

This is where many investors make a critical mistake.

Most people spend a great deal of time thinking about when to buy investments. Far fewer spend time deciding when to sell them.

But in retirement planning, a **sell discipline may be even more important than buying decisions**.

A sell discipline simply means having rules that help reduce risk when conditions change. It helps investors avoid the emotional trap of holding investments simply because they hope the market will recover.

You do so in every other aspect of life, but Wall Street tells you it's a mistake in your investments. When you're driving and it starts to snow, you don't stop but you also don't keep driving at 70 MPH, you slow down. You hold insurance in case your home catches fire. Most years it's not needed, but if it were, not having it would be catastrophic.

A risk management, sell discipline is no different.

Without a plan, investors often hold positions through large declines, waiting for things to “get back to normal.” Unfortunately, by the time the damage becomes clear, portfolios may already be down significantly.

Large losses can be especially dangerous for retirees. If a portfolio drops sharply while withdrawals are being taken, the recovery becomes much harder. Protecting capital during major downturns can be just as important as growing it during good markets.

That is why disciplined investors watch economic risks closely. If energy shocks begin pushing the economy toward recession, markets may eventually reflect that reality.

A sell discipline helps investors act before losses become overwhelming.

We’ve reduced our clients’ exposure to the stock market. We’ve not exited, but we’ve reduced risk. We hope we’ll find it was unnecessary, at which time we will ramp risk back up. But we’re not willing to risk our clients’ retirement on “hope”.

What has your advisor done to manage risk?

The Uncertainty Ahead

No one knows exactly how the current conflict will unfold.

Energy facilities in the Middle East could remain intact and shipping lanes could reopen quickly. If that happens, markets may stabilize and the global economy could continue growing.

But the opposite outcome is also possible. If disruptions last longer than expected, the economic effects could spread through energy markets, shipping routes, fertilizer supplies, and food prices.

Already, several countries in Asia have begun limiting energy usage because of rising costs. That is often an early warning sign that energy pressures are beginning to affect real economic activity.

The longer these disruptions continue, the greater the risk that energy prices act like a powerful tax on the global economy.

And when economic growth slows, financial markets eventually notice.

The Bottom Line

Investing always involves uncertainty. But periods of geopolitical conflict can increase that uncertainty dramatically.

Energy markets sit at the center of the global economy. When they become unstable, the effects can ripple across industries, countries, and financial markets.

History shows that major energy shocks have often been followed by recessions and bear markets. That does not mean a downturn is guaranteed, but it does mean the risk should not be ignored.

For investors approaching or already in retirement, the most important step is not predicting the future. It is maintaining discipline.

A clear investment plan, including a thoughtful sell discipline, can help protect a lifetime of savings if markets become more volatile.

In uncertain times, protecting what you have built may be the most important investment decision of all.

As you know, we employ a sell discipline. We use mathematically based signals to determine when to reduce risk in the portfolios we manage. We don't believe that someone retired, or close to retirement, should have to rely on 'hope';

“Hope this doesn't turn into a bad bear market. Hope we don't lose ½ our retirement accounts. Hope we don't run out of money.”

Hope is not a strategy, nor is it a plan. We believe buy and hold is an incomplete strategy. Instead, it should be buy, hold and **sell**.

Remember after the 2000 dot.com bubble, the S&P-500 didn't reach permanent new highs for 13 years and the NASDAQ for 15 years. What if your retirement accounts were down for the next 13 years, erasing decades of work, saving and investing? How much of your retirement would be wasted?

Certainly, we don't know how long this war in Iran will last and what the impact will be on the stock market or our economy, much less the entire world order. But neither does the person advising you to ignore it.

It's your money, it's your life, protect yourself.

Call the office or attend a seminar to learn more.

Want Help?

Let's review your portfolio, your taxes and your estate plan and design a plan to optimize your retirement. And let's include a math-driven defensive investment sell discipline, tailored to the next phase of the market - not the last one.

Prepare - don't panic.

If you're feeling unsure about how to navigate all of this, or if you're sitting on the sidelines, trying to figure out how (or whether) to get back in, we invite you to call us or join one of our seminars.

We'll walk you through the data, the process, and the options. Our mission is to help you plan with discipline, flexibility, and confidence - whatever the market brings next.

Participate while the trend is strong, but have a clear plan for when to reduce risk.

That's what disciplined investing is all about - balancing the need to capture gains with the need to protect against big losses.

Our 8 Core Investment Principles:

1. We are committed to making your money last as long as you do.
2. Growth is important, but the protection of principal is even more important.
3. The goal of our Invest and Protect strategy is unlimited upside, with tolerable downside.
4. It's better to have the Invest and Protect strategy and not need it, than to need it and not have it.
5. The Invest and Protect strategy sometimes comes with opportunity cost in certain market environments.
6. Take only as much risk as appropriate to achieve your specific financial goals.
7. Paying taxes on gains is preferable to losing those gains, along with your principal.

8. Working with a financial professional who is a fiduciary, and who has a mathematically based protection strategy, may help you achieve a successful retirement.

Investments are but one topic we cover at our seminars, and discuss in our consultations. Retirement can be a time of great joy and freedom. But leaving aspects of your finances unaddressed, adds uncertainty and stress. It's why it is so important to look beyond just your investments. In our free, initial consultations we review these five critical areas:

1. **Protection** - how do you protect against disasters such as a fire, lawsuits and health issues?
2. **Estate Planning** - what is the best estate plan for you and for your heirs? Is the one you have set up properly? And did you know that no matter how good, your estate plan likely does not cover your biggest assets? They certainly don't govern IRAs, 401ks, 403bs, 457s, Roth IRAs, life insurance or annuities.
3. **Income Taxes** - we'd all like to pay less income taxes, but how? Tax planning is becoming harder and harder to find. Your tax preparer is likely overworked, and doesn't have the time, or expertise, to tax plan in consideration of your entire financial picture. We strive to suggest strategies to save taxes over time for you, for your spouse, and for your heirs.
4. **Retirement** - the biggest question we get is *"do I have enough money?"* If you've not yet retired, you can always decide to delay, assuming it's your choice. But if you're already retired, you need to resolve this as early as possible, so smaller changes can make a bigger impact. Our Family Index will tell you a lot about what you need to know.
5. **Investments** - when asked how they pick investments, we receive a variety of answers. Most say they look at 5- or 10-year returns, and assume those will continue into the future. Some get tips from friends or off the internet. Still others are frozen with indecision, and don't really know what they have, or even when or how they got them. This is especially problematic for surviving widows and widowers, who were not the partner "in charge" of the investments. While any of these can work for a time, many, if not most, will ultimately fail, especially in bear markets. We think it's critical to understand how much risk you are taking, what the downside could be, and to decide, BEFORE IT HAPPENS, if you can financially survive. If not, you need to implement a strategy to minimize this risk, again, before it happens.

For many, worrying about investments, along with all the other retirement concerns, is not something they feel comfortable doing. Many would rather spend retirement enjoying themselves.

Working with an advisor may help.

It doesn't matter if you lose money because you pay more than you need to in taxes, get sued or have a disaster, lose it because your estate plan is not implemented properly, or take a big loss during a stock market decline...

It's all lost money!

We offer free, no obligation "Financial Physicals" where we address all of these potential land minds, in addition to your longer term, retirement cash flow needs.

Come to a seminar and decide if a Financial Physical could be helpful.

Hope for the best but plan for the worst.

If you're not a client, what should you do with this information?

Prepare!

Procrastination and Planning both start with a P, but they are not the same.

Failing to prepare, is preparing to fail.

Come to a seminar and find out how you might protect yourself. In our seminars, and at initial, free, consultations called "Financial Physicals" we discuss the five areas most important to financial health for retirees or those close to retirement.

1. Protection
2. Estate Planning
3. Income Tax
4. Retirement
5. Investments

Risk management is key for success in all of those areas.

Consider exploring how you might add a defensive strategy to your investment approach.

Maybe this time is different, and if you're a buy and hold investor with no defensive strategy, you're betting your portfolio, and possibly your retirement, on it.

Attend a seminar or call the office to find how adding a defensive strategy to your portfolio could help because...

Sure, the market comes back, eventually...

How long can you afford your portfolio to be down significantly?

Currently risk-free rates approximate 4.2% compared to what the market "might" make (or more importantly lose) over the coming months, and considering the growing mountain of evidence of an oncoming recession, it seems negligent not to at least explore your options.

***This is even more important if your spouse is not as savvy about
investments as you are.***

The Great Financial Crisis was triggered by the popping of a bubble in real-estate. **The bubble in real-estate today is bigger by most measures.**

The Dot.com bear market was triggered by the popping of a bubble in equity valuations. **The equity bubble is bigger today by most measures.**

Neither the Dot.com nor the Great Financial Crisis bear markets had inflation, or nearly as much debt across consumers and businesses as we have today.

If the Dot.com bubble resulted in the S&P-500 falling ~ -50% and the NASDAQ falling over ~ -80%...

If the Great Financial Crisis saw the S&P-500 fall ~ -57% and the NASDAQ falling over ~ -50%...

***How much might a market fall with levels exceeding
both of those along with inflation and higher
leverage?***

You don't have to remain locked into the same approach as you had when these risks didn't exist. You are allowed to protect yourself. You can step away and then come back when the risks decline. Call us to find out how.

It's time to focus on return of your money rather than return on your money.

To be clear, we'll have a great buying opportunity at some point in the future. Usually that happens with the market crashing and most investors disgusted with the thought of investing. If you lose much of your net worth, participating will be difficult.

"You can't buy low if you don't sell high."

Patience and asset protection will be key.

Don't wait until you have suffered unrecoverable losses before taking action.

In the Great Financial Crisis, the S&P-500 fell 24% from the start on October 9, 2007 until the Lehman bankruptcy on September 15, 2008. That was close to a year, and not that far off from what we've lived through so far.

Then in just over a month from September 15, 2008 to October 27, 2008 the S&P-500 fell **ANOTHER** 28.8%. And from September 15, 2008 to the ultimate bottom, about 5 months later, it fell **ANOTHER** 43%.

Not only do bear markets normally unfold in three stages with the last being the most virulent, it also demonstrates that risk happens slowly and then all at once.

What is your defensive plan?

Call or attend a seminar to hear about ours.

Remember, we have a feature on our website to help you measure your risk tolerance. The problem with trying to decide how much risk to take is we all want to be aggressive when the market is going up, but conservative when it's going down. That's why a sell

What's Your Risk Number?

discipline is important. However, the first line of defense is always our allocation. This approach to measuring risk gives a number by making investors trade off gains and losses. Just click the button to see where you stand.

Get a physical! We invite you to attend a seminar and come in for a “financial physical”, even if you think your current approach is fine. Much like going to the doctor for a physical despite feeling great, you want to make sure any negative issues you may not be aware of are caught early and addressed. For example...

- Do you need a process to help manage losses during the next bear market?
- Have you addressed your investment process and adjusted it for what is going on in the world?
- If not, what are you waiting for?

At the bottom of the 2007 - 2009 bear market the S&P-500 index returned to levels last seen in 1996.

The drop didn't retrace only a few months or even a couple years.

We discuss many of these issues and more on the weekly radio show and invite you to listen.

WEEKLY FOCUS – THINK ABOUT IT

Historical Track Record of Energy Shocks on the Stock Market.

The Barclays Global Aggregate Bond Index (formerly Lehman Brothers Global Aggregate Index), is an unmanaged market-capitalization-weighted benchmark, and tracks the performance of investment-grade fixed income securities denominated in 13 currencies. The index reflects reinvestment of all distributions and changes in market prices.

The Barclays U.S. 1-10 Year TIPS Index is an unmanaged index composed of inflation-protected public obligations of the U.S. Treasury that have a remaining maturity of one to ten years.

The Barclays U.S. Aggregate Bond Index is an unmanaged benchmark index composed of U.S. securities in Treasury, Government-Related, Corporate, and Securitized sectors. It includes securities that are of investment-grade quality or better, have at least one year to maturity, and have an outstanding par value of at least \$250 million.

The Barclays U.S. TIPS Index is an unmanaged index composed of all U.S. Treasury Inflation-Protected Securities rated investment grade, have at least one year to final maturity, and at least \$250 million par amount outstanding.

The Barclays U.S. Treasury Index is an unmanaged index composed of U.S. Treasuries.

The CDX IG 12 is a benchmark high-grade derivatives index, which measures the cost of insuring a basket of U.S. investment-grade corporate debt against defaults.

The Chicago Board Options Exchange Volatility Index (VIX) tracks the expected volatility in the S&P 500 over the next 30 days. A higher number indicates greater expected volatility. Common usage: The Chicago Board Options Exchange Volatility Index (VIX), a barometer of market volatility.

The Dow Jones Industrial Average is a widely followed market indicator based on a price-weighted average of 30 blue-chip stocks that trade on the New York Stock Exchange which are selected by editors of The Wall Street Journal.

The Dow Jones Wilshire Real Estate Securities Index (RESI) is used to measure the U.S. real estate market and includes both real estate investment trusts (REITs) and real estate operating companies (REOCs). It is weighted by float-adjusted market capitalization.

The JP Morgan Emerging Market Bond Index is a total-return, unmanaged trade-weighted index for U.S. dollar-denominated emerging-market bonds, including sovereign debt, quasi-sovereign debt, Brady bonds, loans, and Eurobonds.

The JP Morgan EMBI Global Diversified Index tracks the performance of external debt instruments (including U.S.-dollar-denominated and other external-currency-denominated Brady bonds, loans, Eurobonds and local market instruments) in the emerging markets.

The JP Morgan GBI-EM Global Diversified Index tracks the performance of local-currency bonds issued by emerging market governments.

The MSCI World Index is a free float-adjusted market capitalization weighted index that is designed to measure the equity market performance of developed markets. The MSCI World Index represents 23 developed market countries.

The MSCI All Country World Index is a market-capitalization-weighted index composed of over 2,400 companies, and is representative of the market structure of 46 developed and emerging market countries. The index is calculated with net dividends reinvested in U.S. dollars.

The MSCI EAFE Index is an unmanaged, market-capitalization-weighted equity index that represents the developed world outside North America.

The MSCI Emerging Markets Index is a free float-adjusted market-capitalization-weighted index designed to measure the performance of global emerging market equities.

The NASDAQ Composite Index is a market-value-weighted index of all common stocks listed on the National Association of Securities Dealers Automated Quotations (NASDAQ) system.

The Russell 1000 Index includes 1000 of the largest U.S. equity securities based on market cap and current index membership; it is used to measure the activity of the U.S. large-cap equity market.

The Russell 2000 Index includes 2000 small-cap U.S. equity names and is used to measure the activity of the U.S. small-cap equity market.

The S&P 500 Index is a capitalization-weighted index made up of 500 widely held large-cap U.S. stocks in the Industrials, Transportation, Utilities and Financials sectors.

Investing Terminology

Alpha is a measure of a portfolio's return above a certain benchmarked return.

Alternative Investments are investments that are not one of the three traditional asset types (stocks, bonds and cash). Alternative investments include hedge funds, managed futures, real estate, commodities, and derivatives contracts.

Asset-Backed Securities (ABS) are bonds backed by a pool of loans or accounts receivable and commonly include payments from credit cards, auto loans and mortgage loans.

Austerity refers to measures taken by a country's government in an effort to reduce expenditures and a budget deficit.

Beta is a measure of the volatility or systematic risk of a security or a portfolio in comparison to the market as a whole.

Book-to-Price Ratio is the inverse of the price-to-book ratio, which is calculated as the market value of a security divided by its book value. A lower the price-to-book ratio for a security may mean the security is undervalued, and vice versa (the higher the book-to-price ratio, the better the value).

Commercial Mortgage-Backed Securities (CMBS) are pools of commercial mortgage loans that are packaged together and sold to the public. They are usually structured in tranches, or classes of risk, so that investors can determine how much risk they want to take on. In general, CMBS carry less prepayment risk than loans backed by residential mortgages.

Corporate Bonds are debt securities issued by corporations to raise money; these bonds usually pay higher coupon rates than government or municipal bonds.

Correlation Risk refers to the change in the marked to market value of an asset when the correlation between the underlying assets changes over time.

Credit Ratings are an assessment of the risk of default of a company or country. The higher the credit quality (or rating), the lower the perceived risk of default.

Cyclical Sectors or Stocks are those whose performance is closely tied to the economic environment and business cycle. Managers with a pro-cyclical market view tend to favor stocks that are more sensitive to movements in the broad market and therefore tend to have more volatile performance.

Debt-to-Equity Ratio is calculated as long-term debt divided by common shareholders' equity, and measures the amount of a firm's leverage, or debt.

Donor Advised Funds are private funds administered by a third party and created for the purpose of managing charitable donations on behalf of an organization, family, or individual.

Duration is a measure of a security's price sensitivity to changes in interest rates. Specifically, duration measures the potential change in value of a bond that would result from a 1% change in interest rates. The shorter the duration of a bond, the less its price will potentially change as interest rates go up or down; conversely, the longer the duration of a bond, the more its price will potentially change.

Excess Returns are investment returns from a security or portfolio that exceed a benchmark or index with a similar level of risk.

Grantor Retained Annuity Trust is an estate planning technique that minimizes the tax liability existing when intergenerational transfers of estate assets occur. An irrevocable trust is created for a certain term or period of time. The individual establishing the trust pays a tax when the trust is established. Assets are placed under the trust and then an annuity is paid out every year. When the trust expires, the beneficiary receives the assets estate and gift tax free.

High Yield Debt is rated below investment grade and is considered to be riskier.

Managed Futures strategies use futures contracts as part of their overall investment strategy. They provide portfolio diversification among various types of investment styles and asset classes to help mitigate portfolio risk in a way that is not possible in direct equity investments.

Market Capitalization is calculated as the number of companies shares outstanding multiplied by the share price, and is used to determine the total market value of a company.

Momentum is the rate of acceleration for an economic, price or volume movement; it is used to locate trends within the market.

Mortgage-Backed Securities (MBS) are pools of mortgage loans that are packaged together and sold to the public. They are usually structured in tranches, or classes of risk, so that investors can determine how much risk they want to take on.

Option-adjusted spreads estimate the difference in yield between a security or collection of securities and comparable Treasuries after removing the effects of any special features, such as provisions that allow an issuer to call a security before maturity.

Peripheral Eurozone Countries are those countries in the Eurozone with the smallest economies.

Price-to-Book Ratio is calculated as the market value of a security divided by its book value. A lower the price-to-book ratio for a security may mean the security is undervalued.

Private Foundations are charitable organizations that do not qualify as public charities by government standards. A private foundation is a nonprofit organization which is usually created via a single primary donation from an individual or a business and whose funds and programs are managed by its own trustees or directors.

Quantitative Easing refers to expansionary efforts by central banks to help increase the supply of money in the economy.

Recapitalized/recapitalization refers to injecting fresh equity into a company or a bank, which can be used to absorb future losses. This generally takes place through the company issuing new shares. In the case of a government or organization recapitalizing a bank, it usually results in the government or organization owning a stake in the bank.

Spreads: Yield spreads represents the difference in yields offered between corporate and government bonds. If they tighten, this means that the difference has decreased. If they widen, this means the difference has increased.

Standard Deviation: Statistical measure of historical volatility. A statistical measure of the distance a quantity is likely to lie from its average value. It is applied to the annual rate of return of an investment, to measure the investment's volatility (risk). Standard deviation is synonymous with volatility, in that the greater the standard deviation the more volatile an investment's return will be. A standard deviation of zero would mean an investment has a return rate that never varies.

Treasuries are U.S. government debt obligations that are backed by the full faith and credit of the government. Often, they are used as a proxy for a risk-free asset when comparing other risky assets.

Yield Curves illustrate the relationship between the interest rate, or cost of borrowing, and the time to maturity. Yields move inversely to prices. The Barclays Capital 1-10 Year US TIPS Index: Barclays Capital 1-10 Year US TIPS Index measures the performance of inflation-protected public obligations of the U.S. Treasury that have a remaining maturity of one to ten years.
